設計作品：「嬉影 · Play The Shadow」

榮獲「2009 IF Concept Award」入圍

# Play The Shadow

**Roof(Material- Acrylic)**

**Hexagon Structure  
Material: PVC ETFE**

**Lights**

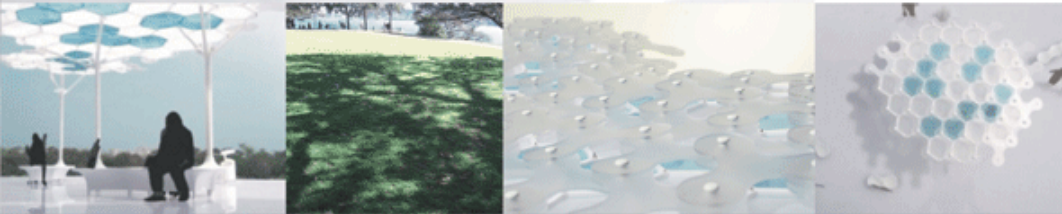

**Seat. Ashcan. Main pillar**

**The latticed floor**

**Concept**  
My concept to create a public stop-off for neighboring workpeople and inhabitant, in order to slow down and refresh the busy and bustling daily life in the city. Furthermore, this attractive and friendly landscape offers an experience of imitated leafy shadow, seating here for a while and feel the gentle breeze to sway. That is, enthusiasm of personal life can agglomerate and associate the emotions between people and people, individuality and the whole environment (city). Therefore, we can in accord with controversy over human and surrounding.

**Design Feature**

1. Play with the shadow  
Through the interlaced roof arise the leafy shadow.
2. Talking to sky  
Arrange some limp ETFE to extend the sight of user into the blue sky.
3. Humanized facilities  
The regular seats fit on transformable user for communication, a person or a group, in the meantime, maintain the personal space form each other.
4. Module disposition  
Easier to associate and manufacture.
